### **Eine neue Unterart von *Parnassius mnemosyne* L. aus dem Talesch-Wald in NW-Iran**

Von Günter **E b e r t**

#### **Summary**

Considering distribution and taxonomic position, the geographical subspecies of *Parnassius mnemosyne* L. in Iran are pointed out. One new subspecies is described. On the contrary to the others it is adapted to the *Fagetum hyrcanum* zone of the Talysch forest near Assalem in NW-Iran. The new subspecies resembles to ssp. *elbursia* and represents the "caucasian type" of *mnemosyne*.
