

A checklist of Insects, Mites and Rodents
affecting stored products in IRAN

By: M.J. Shahhosseini and K.Kamali

Summary

This checklist is intended to serve as a reference for Iranian entomologists, particularly those in plant quarantine and plant protection activities. It has been compiled from personal observations and 104 reports and published literatures concerning pests of stored products in Iran since 1943, particularly reports of Farahbakhsh 1961 (89), Freeman 1958 , 1977 (90,91) and Gentry 1965 (93).

More than 190 species have been grouped under 3 categories of Insects, Mites and Rodents, with reference to their scientific names, products attacked and local distributions in Iran. This summary included only the scientific names of pests of stored products in Iran with reference to their taxonomic orders and families as follows

INSECTA

APTERYGOTA

THYSANURA

LEPISMATIDAE
